# **Executive Summary**

On January 1, 2014, the City of Vernon took over the governance of local parks within the city boundaries under the Greater Vernon Sub-Regional Parks and Trails Service Agreement. Sub-regional parks are still governed by the Regional District of North Okanagan (RDNO) through the Greater Vernon Advisory Committee. RDNO's Greater Vernon Parks and Recreation Master Plan was adopted in 2004. Due to the significant changes since that time and the City's new role in managing local parks, Council determined that a new plan was required: the City of Vernon Parks Master Plan.

The Parks Master Plan outlines a 10 year strategy for the City that provides a framework for decisions related to park development and management to ensure that the community's vision for its park system is being achieved. The planning process involved extensive consultation with the community in an effort to ensure that the plan reflects the goals and direction of a wide range of residents. Consultation methods included two web surveys, focus group workshops, multiple public workshops at various locations, public open houses and meetings and discussions. In addition to this input from the community, the plan is guided by Council's Strategic Plan, the Official Community Plan, the Pedestrian and Bike Master Plan and the Ribbons of Green Trails Plan.

The Parks Master Plan provides the following:

- An inventory of existing parks, complete with their classification and size
- Proposed improvements to existing parks over the next 10 years
- Proposed new parks, either on existing City-owned properties or in areas where property has yet to be acquired
- Proposed expansion to the trail network
- Standards for park facilities and maintenance
- A detailed implementation and funding plan

#### Acknowledgments:

This document was created using input from approximately 3,470 engaged residents, numerous stakeholders, community groups and eight passionate park ambassadors:

- Mike Buffie Polson Park
- Jody Harrison 11 Street Tot Lot
- Harold Sellers Becker Park
- Inge Friesen Longacre Trail
- Gary Haas Girouard Park
- Linda Ledbury Pioneer and Heritage Park
- Rod Drennan Sawicki Park
- Caroline Bowman Lower Commonage Trail

Thank you for your time and meaningful contributions.

A big thank you to the creative talents of Sproing Creative and Buffy Baumbrough for the photographs and Tambellini Design Studio for the layout and formatting. You've help make this document beautiful and accessible.

# Introduction

Vernon's park system is made up of a variety of parks, trails and outdoor recreation facilities. This system provides a multitude of benefits for residents, visitors, businesses and the natural environment. It contributes to a community's identity and unique sense of place. The parks system provides economic and social benefits, contributes to environmental health, community beautification, habitat protection and provides a higher quality of life for residents. Parks and trails are the common spaces in our community where everyone is welcome to experience leisure; people can

socialize, enjoy physical activity or simply relax in nature.

The Parks Master Plan represents a vision for parks, trails and outdoor recreation, created with guidance from the generous and thoughtful input of more than 3,470 residents and stakeholders. The Plan is consistent with and supports Vernon's Official Community Plan, and provides direction to effectively and responsibly manage the parks system to 2025 to ensure the growing community is well served with amenities in a sound, fiscally responsible manner.

## Vision

Vernon's parks system plays a large role in helping residents stay active and enjoy the healthy lifestyle they value. Parks also connect and protect key habitats, encourage nearby development and attract more people to the city. These parks provide relief from the urban environment and beautify the community.

This plan envisions a park system where parks are well distributed throughout the City, have a wide variety of functions, are physically accessible and promote healthy active living. An expanded network of trails provides enjoyment and interconnectivity though and between neighbourhoods, while increasingly popular sports find a home in Vernon. New parks are provided as new neighbourhoods develop, while at the same time, existing parks continue to be well maintained and managed.

## History

Parks in Vernon have been created in many different ways over time. Lands such as Polson Park have been generously donated by families. Other lands have been dedicated as part of a development process and the subdivision of land, while other land for parks has been purchased. The parks system was previously managed for the City of Vernon, District of Coldstream and Electoral Areas B and C, collectively known as Greater Vernon, by the Regional District of North Okanagan (RDNO).

The first Parks and Recreation Master Plan for Greater Vernon was adopted in 1991. It was replaced by the Greater Vernon Parks and Recreation Master Plan in 2004. These plans provided guidance for a shared vision and responsibility for maintaining, operating and improving parks and facilities, and for acquiring and developing new parks. The plans included recommendations for parkland acquisition, indoor and outdoor recreation facilities, trails, beaches, recreation programs, human

resources and financing in a prioritized phasing and capital plan. This was done under various governance structures including, most recently, the Greater Vernon Advisory Committee (GVAC).

On January 1, 2014, under the Greater Vernon Sub-Regional Parks and Trails Service Agreement, the City of Vernon took over the governance of local parks within the city boundaries. Sub-regional parks are still governed by RDNO through GVAC. The agreement included park properties transferred between the City of Vernon and RDNO based on the new structure and identified which parks were local and which were sub-regional. Financial agreements were also made regarding the distribution of collected development cost charges and parks reserves. These changes resulted in the need for Vernon to develop a plan for its parks system.

Sub-Regional Parks serve a more regional population and include larger Athletic Parks (Marshall Fields and DND), Community Parks on the lake (Kin Beach and Paddlewheel) and significant trail systems (Grey Canal and BX).

Local Parks serve primarily the residents and visitors of Vernon.
They include Community Parks that are destinations (Polson and Lakeview), all neighbourhood parks, some Athletic Parks (Kin Race Track and Alexis Park) and smaller trail systems (Longacre and Becker Park Trails).

#### **Planning Context**

The Official Community Plan (OCP) outlines the vision for the future growth of Vernon and provides guidance for policy development and decision making. Vernon's OCP focuses on promoting compact urban development that supports responsible asset management (including parks), encourages more housing choices and provides transportation options. This is achieved by focusing on the City Centre (Development District 1) as the top priority for redevelopment, followed by a network of neighbourhood centres throughout the city (Development District 2), such as the Waterfront and the area around Polson Mall. New development on hillsides and agricultural lands (Development District 3) is focused in adopted Neighbourhood Plan Areas.

The growth strategy aims to encourage development where services and amenities already exist to better serve the residents of the community in a fiscally responsible manner. The Parks Master Plan aims to support the OCP's growth strategy and was developed using the guidance provided by the tremendous public input that was received.

#### The OCP Guiding Principles are:

- Foster prosperity for people, business and government
- Protect and preserve green spaces and sensitive areas
- Ensure housing meets the needs of the whole community
- Create a culture of sustainability
- Protect agricultural land
- Create strong, compact and complete neighbourhoods
- Provide alternative transportation
- Revitalize the Downtown
- Create a youth friendly city

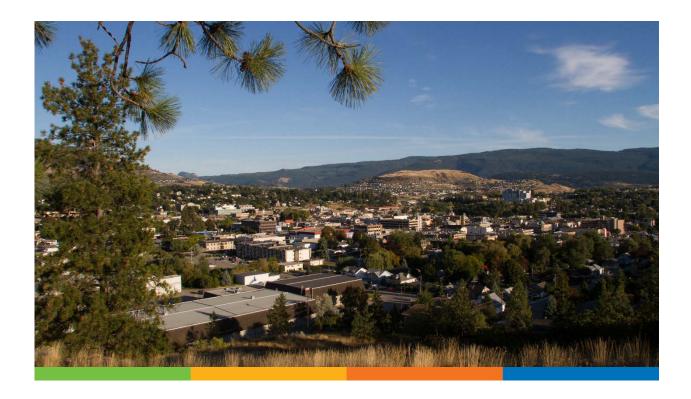

Many areas in Development District 3 have policy documents, known as Neighbourhood Plans that guide their development. Each plan provides details on parks and trails. Predator Ridge, The Rise and Turtle Mountain also have parkland transfer agreements which outline parkland dedication requirements as development progresses. Parks planning in these Neighbourhood Plan areas is very specific to those neighbourhoods. Given the detailed guidance for parks in these existing Neighbourhood Plans, the Parks Master Plan focuses primarily on Development District 1 and 2.

Vernon's trail network is a highly valued recreational amenity and forms an important part of the transportation system. Connectivity is critical for the overall function, attractiveness and usefulness of the system. Guidance and details pertaining to trail development comes from both the Pedestrian and Bike Master Plan and the Ribbons of Green Trail Society Trails Plan. Both documents were updated and endorsed by Council in 2014 and 2015 and greatly inform the trail policies in the Parks Master Plan.

# Population

## **Vernon Population**

Vernon's population was estimated at 38,150 in 2011. The average annual population growth between the years 2001 – 2011 was approximately 1%, amounting to an additional 4,608 people. Much of that growth took place between 2005 – 2008

(Figure 1). The growth rate fluctuated between 2010 and 2013 based on estimates from BC Stats, though by 2014 the population rate was again increasing.

The Parks Master Plan considers that Vernon's parks system will attract not only local residents but also people throughout the region. The surrounding population in Greater Vernon and in the Regional District has a direct relationship to park usage,

especially Community Parks and Athletic Parks. Figure 2 documents the population in Greater Vernon and the North Okanagan for 2001, 2006 and 2011 (Statistics Canada).

Figure 1: Vernon Population 2002-2014

Source: Population Estimates in Municipalities, Regional Districts and Development Regions, BC Stats (2014). Note: these estimates are based on a methodology distinct from Statistics Canada, resulting in slightly different population estimates.

Figure 2 – Greater Vernon and North Okanagan Population Growth 2001, 2006, 2011

Jurisdiction	2001 Census	2006 Census	2011 Census	% Change
City of Vernon	33,542	35,944	38,150	13.7%
District of Coldstream	9,106	9,471	10,314	13.2%
Electoral Areas "B" & "C"	6,694	7,158	6,918	3.35%
Okanagan Indian Band Reserve No. 1 & No. 6	2,236	2,845	2,673	19.54%
Total Greater Vernon	51,578	55,418	58,055	12.56%
Regional District of North Okanagan	73,227	77,301	81,237	10.94%

Source: 2001, 2006, 2011 Census Profiles, Statistics Canada.

#### Population Density by Area and Neighbourhood

As shown on Map 1, there are 17 census "neighbourhoods" within the Vernon boundaries. Figure 3 shows the population of these 17 neighbourhoods. Many neighbourhoods have a high percentage of young people (ages 14 years and younger) such as Mission Hill, South Vernon, Harwood and the Foothills. A high percentage of seniors (65 years and older) are living in the City Centre, West

Vernon, Fulton View and North Vernon neighbourhoods. When designing new parks or making improvements to existing ones, the surrounding population demographics are assessed and considered to ensure park design, structures, improvements and amenities suit the surrounding residents, as well as possible future residents and other potential users.

**Map 1: City of Vernon Neighbourhoods** 

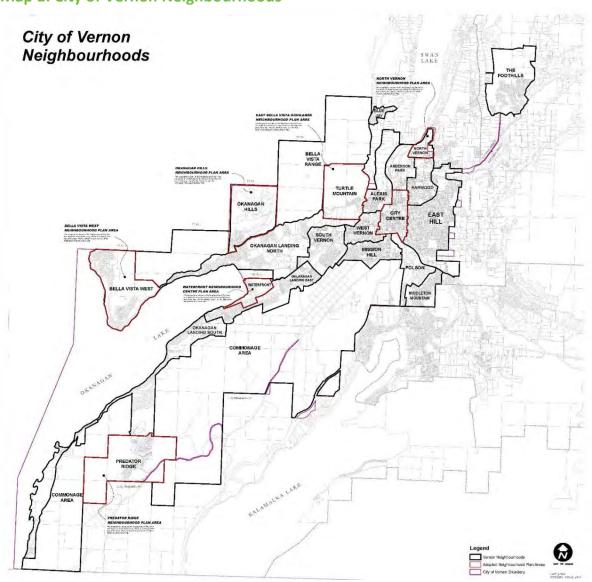

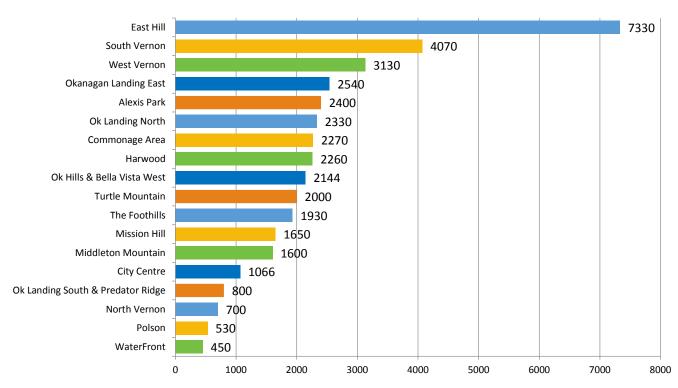

Figure 3: Vernon Population by Neighbourhood, 2011

Source: City of Vernon, 2013

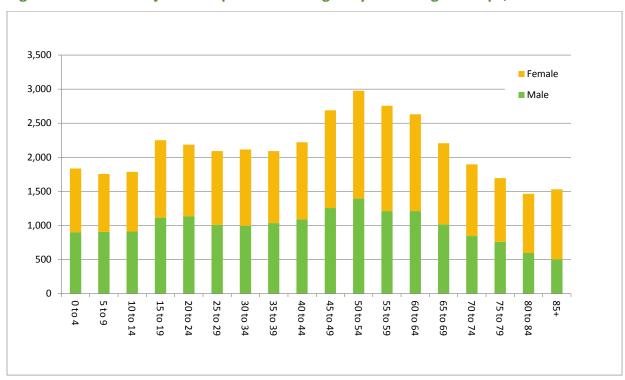

#### **Population Projections**

Between 2001 and 2011, Vernon has experienced a steady population growth of an average of 1%. In more recent years, Vernon had experienced a slight decline in population however census data confirmed in 2014 that the population was on the raise again (~0.87%). According to population projections, a growth rate of 1% a year is expected for the next 25 years. By 2036 the population is projected to increase by 9,850 people, resulting in a total population of 48,000.

Economic development initiatives and public investment in amenities, such as parks and trails, all form part of the strategy in the Official Community Plan to attract and retain young families in Vernon.

The Official Community Plan and supplementary documents include many policies and programs to encourage youth and young families to move to Vernon. "Create a youth friendly city" is one of the OCP's guiding principles, and the growth strategy and land use plan in the OCP is intended to create a community where younger people want to live.

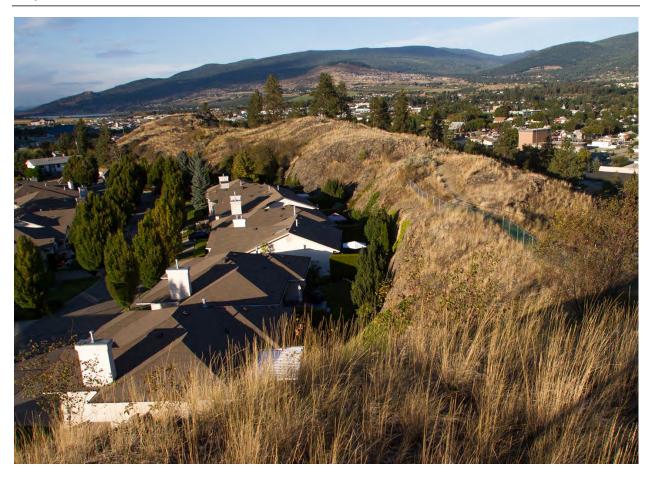

Figure 4: Vernon Projected Population Changes by 5 Year Age Groups, 2011-2036

Source: City of Vernon, 2013

## **Implications**

A 2015 population of 39,000 is expected and a 2025 population of 44,000 is projected.

Vernon's population is aging. One of the reasons for this would be that seniors are more active and are living a healthier lifestyle. However, the Official Community Plan and supplementary documents include many

policies and programs to encourage youth and young families to move to Vernon. "Create a youth friendly city" is one of the OCP's guiding principles. Therefore, when planning and designing parks within the various neighbourhoods, the census data is reviewed, and consultation with the neighbourhoods will aid in the development of these existing and new parks to come.

# Planning Process and Consultation Method

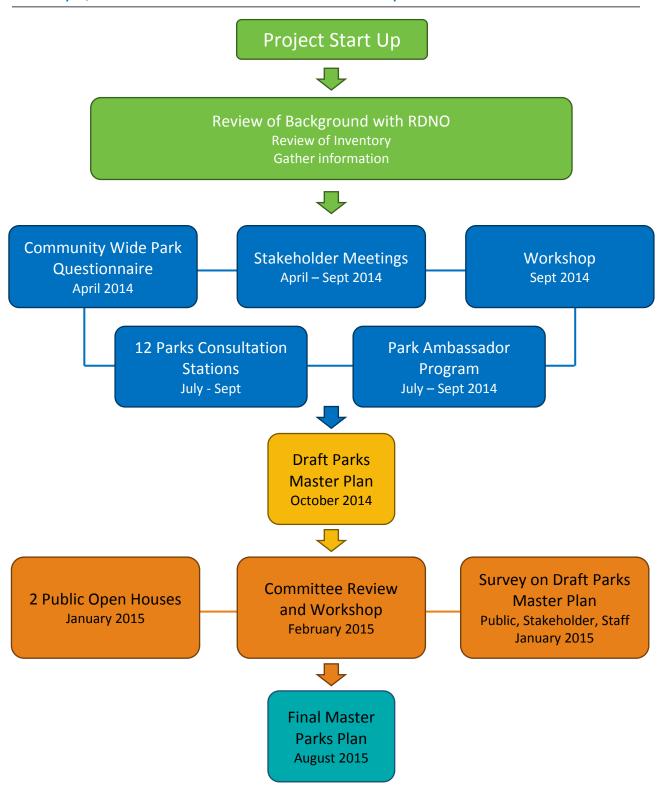

The planning process involved extensive consultation with the community in an effort to ensure that the Parks Master Plan would reflect the goals and objectives of a wide range of residents. A variety of opportunities were provided for residents to participate in the process in an effort to get the opinions of people of different ages and household types.

The consultation process used is outlined below:

January 1, 2014 - Governance of Local Parks to City of Vernon

# Phase 1 Consultation

## Community Wide Park Questionnaire

A community wide questionnaire was launched in April 2014 to gauge the community's level of satisfaction with the existing parks system. The questionnaire was also designed to see how the residents use parks and get their opinions on how to improve them. The questionnaire was available in hard copy and online, and distributed in part through the quarterly utility bills (~14,000 copies).

# Stakeholder Meetings and Workshops

Numerous smaller stakeholder meetings and workshops were held with the following groups:

- Seniors Action Network
- Pickleball representatives
- Tennis representatives

- Lacrosse representatives
- Soccer representatives
- Disc golf representatives
- North Okanagan Sports Society
- North Okanagan Early Years Council
- Maven Lane staff, parents and surrounding residents
- Kalamalka Rotary Club
- Kokanee Swim Club
- North Okanagan Parks and Natural Areas Trust
- Ribbons of Green Trail Society
- Community Garden Stakeholders
- Fulton Grade 10 Social Studies students

A specific meeting was held with representatives from the following organizations to discuss the preservation of environmental areas in the North Okanagan with RDNO, City of Vernon and District of Coldstream staff:

- Ribbons of Green Trail Society
- North Okanagan Naturalists Club

- Vernon in Transition (Transition Towns)
- Vernon Outdoors Club
- North Okanagan Parks and Natural Areas
   Trust
- Okanagan Conservation Planning/Okanagan Cooperative Conservation Program
- Allan Brooks Nature Centre
- Okanagan Science Centre

#### **Parks Consultation Stations**

Twelve consultation stations were set up throughout the city at various parks and at special events in the summer of 2014. These stations provided the opportunity for the public to discuss their priorities, strategies and recommendations for the plan. Activities for children were also conducted including a parks themed colouring contest.

#### Park Ambassador Program

Eight park ambassadors monitored the park of their choice from July to September 2014. Information was gathered to provide a better understanding of how these parks were used at different times of the day, different days of the week and how they could be improved.

# Phase 2 Consultation

#### **Public Open Houses**

Two public sessions on January 24 2015, and January 27, 2015 was held to present and obtain comments on the draft Parks Master Plan

# Council and Committees of Council Review and Workshop

On February 19, 2015, a workshop was held with various Council and Council committee members in attendance. Three sessions were established the plan funding, the proposed projects and acquisitions, and the trail network system. The purpose of these sessions was to request input and recommendations on these topics.

#### Surveys

A second round of surveys were launched online in December 2014 to gauge community, stakeholder and staff levels of satisfaction with the draft Parks Master Plan.

# Feedback Results

### **Top Public Priorities:**

1. Trails and Pathways

3. Natural Areas

2. Lake/Beach Access

4. Community and Neighbourhood Parks

## Top 10 Activities People Engage in Most Frequently

Hiking, trail and pathway use

Walking, jogging, running

Visiting the beach

Enjoying nature/ wildlife viewing

Outdoor exercise

Dog walking

Visiting a playground

Cycling, mountain biking, BMX

Social cultural outings/ special events

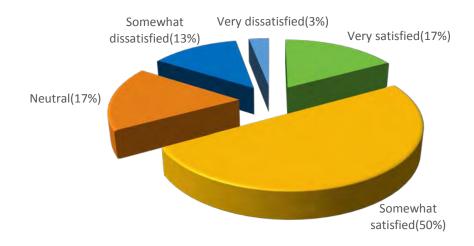

Field use: soccer, baseball, softball, football

Parks Master Plan 2015

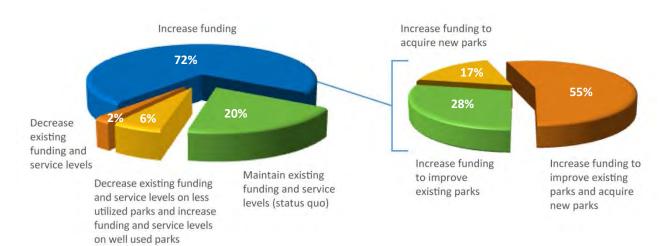

page 18

#### Public Satisfaction with the Parks System

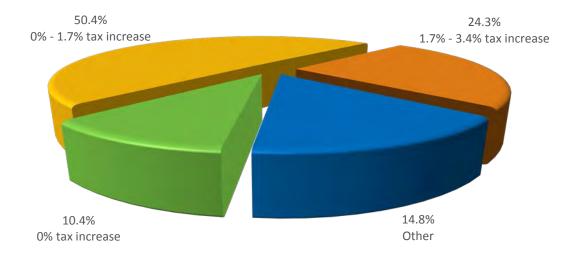

## **Funding Approaches**

#### Who supported which tax increase?

As part of the second survey, tax increase options were explored to account for the funding shortfall. The public survey results reported that: 10.4% of residence did not support a tax increase, 50.4% of residence supported a 0% -1.7% tax increase, 24.3% of residence supported a 1.7% - 3.4% tax increase and 14.8% of residences support another amount. The comments regarding the "other" amounts varied between a higher tax increase than 3.4% and no tax increase.

From the feedback results, the top priorities were to focus on trails/pathways, access to lakes/beach areas, natural areas and community/neighbourhood parks. Here are a few of the main priorities that were heard from the general public:

- The need for more connected and safe multi use paths, trails, bike lanes and sidewalks around Vernon for all types of users
- Complete the Grey Canal trail
- Develop trails that connect neighbourhoods
- Establish a continuous trail/boardwalk along Okanagan Lake
- Improve and expand the number of lake access points and boat launches
- Explore acquiring a large natural reserve area (Commonage or O'Keefe rangelands)
- Evaluate expanding dog parks, establishing a dog beach and increasing enforcement
- Complete something with the land at Kin Race Track
- Create dedicated pickleball courts

# Parks Supply

The following section explores the existing parks supply for each type of park within the City of Vernon.

## How much parkland do we have?

Overall, Vernon has a healthy supply of parkland based on a historic Canadian benchmark of 4 hectares of parkland per every 1000 people. Based on the existing supply of sub-regional and local parks, Vernon has 208 hectares of parkland. This analysis does not include School District properties, provincial parks or land owned by the City that is not developed as park. With an estimated population of 39,000 in 2015, the existing supply is 5.5 ha/1000 residents. In the year

2025, the projected population is expected to be approximately 44,000. Without adding any parkland to the existing supply over the next ten years, that still equates to a healthy supply of 4.9 ha/1000 residents.

Current parkland supply (2015) = 5.3 ha/1000 residents

Parkland supply in 2025 with no new parks = 4.7ha/1000 residents

Vernon has an additional 20.2 hectares of land either owned by the City for future park use or governed by agreements for future parkland dedications (for example, Predator Ridge and The Rise) that will be developed over time.

## What kind of parkland do we have?

Park Type	Amount in Hectares	% of Total Supply
Natural Areas	85	41%
Community Parks	25	12%
Neighbourhood Parks	21	10%
Urban Parks and Plazas	1	1%
Athletic Parks	76	36%

#### Where is our parkland?

Now that we know how much we have and what kind of parkland it is, it is important to understand where it is. The following is a breakdown of the amount of parkland found in each Development District (DD) identified in the OCP.

### DD1: City Centre

Existing 4.08 Ha or 2% of the total parkland

## DD2: Neighbourhood District

Existing 99.1 ha or 48% of the total parkland

# DD3: Hillside Residential and Agricultural District

Existing 104.82 ha or 50% of the total parkland

The numbers above show the need to focus parkland acquisition in Development District 1 and 2, to support the OCP and the desired growth of the community.

## Park Types

### Natural Areas and Open Space:

41% of existing supply (85 hectares)

Parks contribute to the protection and connection of natural areas, sensitive ecosystems and wetlands. The system should aim to protect

and enhance biodiversity. The main purpose of Natural Area parks is to protect and preserve critical habitats while connecting Vernon residents to nature. These parks contribute to the ecological resilience of the community, preserve the natural environment and protect natural ecosystem functions. Though all parks should have an ecological function, the main purpose of these parks is to contribute to the natural health of the environment and the community.

Natural Areas and Open Space make up the largest category in the parks supply; however, the existing inventory categorizes lands in their

existing state, and many are natural areas with minimal improvements except trails. Some natural areas may lend themselves to additional improvements, where appropriate, to facilitate new uses and user groups.

Connectivity is perhaps the most important aspect of habitat protection and preservation, something many parks currently lack. To better achieve connectivity, Natural Area parks should ideally be integrated with privately protected land to protect sensitive ecosystems and habitat, riparian areas along waterways and provide wildlife corridors. During the development process, the Official Community Plan and the Environment Management Areas Strategy aim to provide and facilitate protection

measures, such as covenants, for sensitive areas.

#### **Community Parks:**

12% of existing supply (25 hectares)

These destination parks serve the entire community and provide leisure and recreational opportunities for multiple users of all ages. They are generally

supplied with a range of recreational facilities, including playgrounds, walkways, parking lots, sports fields and special amenities. They are often much larger in size than neighbourhood parks. These parks have a variety of uses and require a higher level of service than other parks.

#### Neighbourhood Parks:

10% of existing supply (21 hectares)

These parks act as the heart of individual neighbourhoods and provide leisure and play opportunities for nearby residents. As they are smaller and serve residents in a much closer proximity than Community Parks,
Neighhourhood Parks are often accessed by walking or biking and offer more common amenities such as playground structures, benches and picnic tables. They tend to accommodate shorter stays. These parks receive a moderate level of maintenance.

#### **Urban Parks and Plazas:**

> 1% of existing supply (1 hectare)

Though Urban Parks and Plazas make up less than 1% of the total parks supply, they play a very important role in our community, particularly in the City Centre. Plazas such as Spirit Square and the Civic Plaza provide a respite from the city life surrounding them. They are meeting places for downtown employees over lunch, stages for cultural performances and places for families to rest and relax when they visit downtown. Urban Parks and Plazas often have many activities and amenities, in addition to fountains or other features. They often require a high level of maintenance.

Vernon's growth strategy encourages residential and commercial development in the City Centre, and this is supported by policies in the City Centre Neighbourhood Plan and the OCP. Increased park space is necessary to achieve a high quality of life for City Centre residents, employees and visitors and to ensure that the neighbourhood is a desirable place to live, do business, shop and play.

#### **Athletic Parks:**

36 % of existing supply (76 hectares)

Athletic Parks include infrastructure that facilitates sporting activities. These parks are where we play baseball, softball, soccer, tennis, pickleball, football, horseshoes, lawnbowling, ultimate frisbee, lacrosse and where we ride skateboards, longboards, bikes of all kinds, scooters and in-line skates for enjoyment rather than for transportation.

These parks primarily have an athletic focus but often include playground structures that serve adjacent neighbourhoods or provide children the opportunity for play while family and friends are engaged in sporting activities.

#### Sport Field /Court Supply

Vernon is generally well supplied with outdoor recreation facilities based on the current population. Using midrange benchmarks, based on other communities across BC and Canada, the key measured facility supply in Vernon is represented in the following table. Sub-regional parks, local parks and School District facilities are included in the analysis.

Facility Type and Mid- Range Benchmark	Mid-Range Target 2015 39,000 pop	Mid-Range Target 2025 44,000 pop	Existing Supply
Baseball 1/8500	5	5	4
Softball 1/4500	9	10	38
Sports Fields 1/4500	9	10	31 (10 full size)
Tennis 1/2500	16	18	16*

<sup>\*9</sup> of the courts have a poly surface and 7 do not

Vernon has a healthy supply of outdoor sports facilities but the overall quality could be improved. Strategic upgrades must be planned and maintenance levels evaluated to ensure the supply adequately serves the community in a cost effective manner. At peak season in any sport, the demand for facilities is high,

especially peak soccer times, the spring softball season and the fall football and lacrosse seasons. This is a good problem to have and can be managed with clear communication and collaboration between user groups in addition to some

enhancements. For example, lighting for night use at certain fields may decrease the pressure on some facilities, especially in the spring and fall seasons. Also upgrading some of the softball diamonds to meet standards and/or removing diamonds that are in disrepair and replacing it with a multi-purpose field for various users will aid in the scheduling conflict

between users in peak seasons. Parkland acquisition for new Athletic Parks is likely not required in the life of this plan. Rather, it is recommended that resources be directed to improving existing facilities.

The tennis facility supply in Vernon meets the

mid-range benchmark and the neighbouring community of Coldstream is very well served based on its population. Tennis players in the region often play in both communities. Nine of the courts in Vernon have the desired poly surface finish and the remaining seven are

asphalt. There is also an added pressure on courts with the increasing popularity of pickleball. There is not yet a dedicated pickleball facility in Vernon. There are currently four tennis courts that double as 16 pickleball court, which puts added pressure on dual use courts. Each Athletic Park is identified below

# Local Athletic Parks

Park	Size (ha)	Features
Alexis Park	1.6	16 horseshoe pitches with lighting, horseshoe clubhouse, 1 softball diamond, washrooms, playground
BMX Ranger Park	0.76	BMX Park, washrooms and clubhouse/storage building
Grahame Park	4.3	2 sports fields, 3 ball diamonds, 5 basketball courts, washroom building, playground. This park is shared with Fulton Secondary School, restricting hours of use for residents. Maintenance of the fields are shared with the School District
Kin Race Track	19.2	Adjacent to Kal Tire Place, 4 softball diamonds, Equestrian Race Track, washroom building
		Kin Race Track provides the opportunity for more outdoor recreation uses; however, planning cannot take place until legal issues surrounding the Equestrian Race Track are resolved. Kin Race Track was always envisioned to accommodate additional recreation activities. The location and size of the property, as well as existing amenities, such as parking and washrooms associated with Kal Tire Place, invite additional recreational uses.
MacDonald Park	2.6	2 tennis courts and 8 pickleball courts (shared use), 2 full size soccer fields or 4 small, washroom/concession/clubhouse building

## Sub-Regional Athletic Parks

The largest athletic outdoor recreation facilities in Vernon are owned and managed by the Regional District. Recommendations regarding these facilities, based on public and stakeholder feedback, has been provided to RDNO as part of the Parks Master Plan process. Vernon will continue to work with RDNO to ensure subregional Athletic Parks help serve residents' recreational needs. Detailed below are the two sub-regional athletic parks within Vernon and the recently installed Track in Coldstream.

#### Marshall Fields

16.25 ha, 5 full size soccer fields, 4 tennis courts, 2 baseball diamonds, On-leash dog walking area and trails.

Marshall Fields is located in the Waterfront Neighbourhood Centre. More residential development is anticipated to the south of the park, making Marshall Fields a likely destination

for many more residents in the future. The Airport lands north of Vernon Creek and the Lakers Clubhouse are also adjacent to Marshall Fields.

Marshall Fields are the most well used soccer and tennis facilities in the North Okanagan. There are also two baseball diamonds. This park is well used and not surprisingly, garnered the most feedback of any athletic park in the public consultation process. All feedback has been given to RDNO for consideration.

College. Greater Vernon Athletic Park is the latest sub-regional athletic park to be installed in the Greater Vernon Area. Facilities that are on-site include: synthetic turf field, natural turf field, IAAF-compliant running track, jumping areas, and throwing areas. The synthetic turf field does have lights and will help with accommodating sports user groups scheduling conflicts in peak seasons. The building has washrooms, change rooms, a concession area, classroom space and an official's room.

# Department of National Defence (DND) Army Camp

27.3 ha, 10 softball diamonds, 3 large playing fields, playground, a dog park and washrooms.

DND is the region's major softball facility and is the park that hosts the large softball tournament, Funtastic, every summer. The land is leased to RDNO by the Department of National Defence. This presents some uncertainty of the future use of the land, however, there is no indication that the lease will not be renewed in the future.

#### **Greater Vernon Athletic Park**

The Greater Vernon Athletic Park is located just outside of the Vernon boundary in the District of Coldstream adjacent to the Okanagan

## School District Properties

The community is dependent on School District properties to supplement the outdoor recreation facility and parks supply. The outside usable school district property within the City of Vernon is approximately 19.0 ha. A Joint Use understanding between RDNO, the City and School District has been in place for approximately 15 years, with programming and booking support provided by Recreation Services. This understanding has worked well in the past but to clarify roles, expectations, responsibilities and provide some level of surety regarding community use of School District properties. The City will continue to work with the School District to formalize an agreement that aims to suit all parties and benefit the community.

# Recreation Programming Public Recreation and Programming

## **Outdoor Recreation Strengths:**

- Well supplied with outdoor recreation facilities
- A centralized outdoor facility booking system
- High demand for and participation in outdoor recreation programs
- Numerous private recreation programs offered

## Outdoor Recreation Challenges:

- Aging outdoor facilities
- Competition and conflict between sports groups for facilities
- Summer program staffing
- Youth and senior program participation

Recreation Services is responsible for the development, delivery and monitoring of public recreation facilities and programs for Greater Vernon that meet the needs of the community in a cost effective manner. To ensure this, new trends and best practices in recreation are researched and new programs are explored, proposed, delivered (depending on demand), monitored and evaluated.

The Regional District of North Okanagan recently reviewed the recreation service delivery model for Greater Vernon Parks, Recreation and Culture, resulting in the new Greater Vernon Recreation Facilities and Programming Agreement. As a result, the City of Vernon took on responsibility for all aspects of recreation in the Greater Vernon area including governance and ownership of recreation facilities. The agreement is a fee for service partnership with the Greater Vernon

partners. The new governance structure gives the City of Vernon more flexibility and freedom to develop and provide services while still allowing the citizens of Areas B and C and the District of Coldstream to have equal access to facilities and programs.

Many businesses, individuals and organizations offer private recreation programs which add to the available services the public can access. Many of them use local parks to deliver programs. Currently, there is no system in place for centralized information regarding these programs.

# Improvements to Existing Parks

The benefits of sport and play are endless. Getting people outside and active in all stages of life and interacting with others is critical to the overall health of our residents. People work hard in their daily lives and need opportunities to play. Encouraging activity, whether programmed or spontaneous, improves health and wellness, facilitates human interaction and increases overall quality of life.

Parks and outdoor recreation are intertwined. Park visitors are often pursuing recreational activities that are highly dependent on the location, built outdoor facilities and infrastructure provided in a park or on school grounds. This section explores the various Park types while providing a breakdown of the

general and site specific recommendations for improvements to the existing parks.

The management principles for the park types are also included in this section. A thoughtful, consistent approach is desired to uphold the principles the public would like to see for a well-managed and maintained system that increases the overall function and enjoyment of parks. The standard of maintenance in parks affects community pride and ultimately how people feel while in parks, how they use them and how they treat them. At the same time, the management of the parks system must be financially sustainable, and consider the long term financial implications of the desired level of service.

# Natural Areas and Open Space:

#### **General Recommendations:**

- Encourage environmental protection in natural areas through park design, management and monitoring
- Continue to work with local environmental organizations on park stewardship initiatives
- Enhance community awareness about the natural environment through interpretive signage
- Protect natural drainage systems and wetland areas to enhance ecological and wildlife habitat throughout the community
- Continue to work collaboratively with other levels of government to protect sensitive areas and endangered species, such as establishing environmental stewardship on City owned lands where protection measures are desired
- Continue to work with the Okanagan Collaborative Conservation Program (OCCP) to share information and expertise that leads to further preservation of sensitive areas
- Continue to strive to protect and connect sensitive areas through parkland acquisition and private land protection mechanisms

#### **Management Principles:**

- Trail signs should be consistent and interpretive signage should be direct
- Pathway designs and locations should provide adequate accessibility
- If lighting is required, solar powered units should be considered prior to hydro service
- Native trees and shrubs shall be planted as required for habitat restoration and enhancement
- For effective establishment of interior grassland seed mix, a weed control plan is needed
- All site amenities should be selected and designed to achieve site specific naturalization objectives

#### **Site Specific:**

#### **Lakers Park**

Lakers Park is considered a Natural Park due to the sensitive habitats that are located on the property. Currently, the amenities that can be found at this park are natural walking trails, wetlands, ponds, Lakers Clubhouse, a small playground, and a parking lot. This park is unique since it is adjacent to Marshall Fields which is a Sub-regional Athletic Park and therefore services a larger amount of people from the community. Recommendations for this park include:

- Develop a 9 hole Disc Golf Course at Lakers Park with assistance from the Disc Golf Vernon Club and community consultation
- Explore providing additional parking at Lakers Park in the vacant area to the south of the existing clubhouse and parking lot to serve recreation uses in area, the Lakers Clubhouse and beach users

## Community Parks:

#### **General Recommendations:**

- Establish free WiFi service in all Community Parks
- Ensure access to washrooms and drinking water
- Ensure amenities consider all facets of the community, including ages, abilities and access
- Work with stakeholders, community organizations and Recreation Services to program events, social activities, recreation programs, music, art and entertainment
- Evaluate and provide, as needed, playground, benches, picnic tables (with barbeque attachments), shade trees in strategic locations and key trail linkages, acknowledging their importance for park enjoyment and use and providing key linkages between destinations

#### **Management Principles:**

- Dedicate the highest level of maintenance to Community Parks as they provide a more varied and higher concentration of amenities
- Larger community parks (eg. Polson Park) with more amenities should have wayfinding signage at entrances to guide people to these amenities
- Irrigation should be placed near playground areas, athletic fields and amenities,

- however, it should be restricted in other park areas
- Minimum tree coverage should be 10 trees per 1 acre
- Decorative landscaping is generally provided at entrances and around higher use areas
- Washroom replacement and redevelopment should be evaluated on a site by site basis
- Ensure adequate vehicular and bike parking is provided
- Ensure that walking routes are established throughout parks
- Cut grass once per week, as a minimum standard
- Waste collection should take place daily in the summer months. Reduce collection throughout the other months

#### **Site Specific:**

#### **Polson Park**

Polson Park is the primary destination park in Vernon, and is often referred to as "the jewel" of the city. The land was originally donated by the Polson family in 1908 for a hospital, with the lower grounds later being developed into this public park. Bordered by Highway 97, Highway 6 and located just below the Vernon Jubilee Hospital, it acts as the entrance to the city and is filled with various activities, facilities and attractions. All ages enjoy Polson Park for

its abundance of leisure activities which include a playground, waterpark, skateboarding, tennis, soccer, football, lawn bowling, running, concerts, picnicking, relaxing and wildlife viewing. Polson Park is also host to many large community events, such as the annual Canada Day celebration, which draws large crowds with music, activities and food.

A conceptual redevelopment plan for Polson Park was developed in 2010 by Catherine Berris Associates, under the auspices of the Regional District of North Okanagan and with the assistance of the City of Vernon. It presented a long term plan that was to be implemented over a 10 year period. The preliminary cost estimate for all phases of work was over \$10,000,000. The Polson Park redevelopment Plan was never formally endorsed.

Some of the main improvements the public suggested for Polson Park were to explore active uses for youth, upgrade the band shell and playground, improve signage throughout the park, solve drainage issues, improve alternative vehicular and pedestrian circulation routes and restore the creek.

Based on the community feedback the following is recommended:

- Continue to conduct incremental improvements to Polson Park, guided by the draft Polson Park Redevelopment Plan and based on annually approved budgets. Prioritize the development of an improved, more welcoming south entrance from the Polson Neighbourhood Centre
- Revise and complete the Polson Park Redevelopment Plan starting in 2016, with further community engagement, and rephase the proposal to fit a \$3.5 million budget over 10 years to 2025

- Consider outdoor recreation and athletic uses as part of the Polson Park Redevelopment Plan
- Expand youth related uses west of the Rotary Skateboard Park in Polson Park; most specifically consider, with input from youth, a concrete pump track for multi-use and a basketball court. Include lighting for night use along the north side of Polson Park.
- Continue to aim to make Polson Park a place where park users feel safe, discourage negative use of the park while acknowledging that Community Parks are for everyone to enjoy
- Utilize Crime Prevention Through Environmental Design principles when planning and designing park improvements

#### **Lakeview Park**

Lakeview Park is considered a Community Park due to the high summer usage and the number of amenities found there: two ball diamonds, a playground, green space and the popular "Peanut Pool", a small outdoor pool designed primarily for children and unique in Vernon. While the park services the larger Vernon community, it also acts as a neighbourhood park for East Hill.

The feedback from public consultation held at this park showed a desire to add more benches, a picnic shelter, picnic tables and shade trees.

The washroom, change room and lifeguard facility is in need of replacement. The addition of a picnic shelter is already planned and budgeted for in 2014. Additional recommendations for this park include:

- Redevelop and relocate the washroom facility to allow easy surveillance for parents between both the playground and the pool
- Consider adding a food and beverage concession component to the new

- washroom facility for user enjoyment and increased potential revenue
- Consider the additions of spray park features to be incorporated with the peanut pool to increase use, enjoyment and overall capacity
- Plant and nurture shade trees around the pool and playground structures
- Develop and implement a tree succession planting program

**Sub-regional Community Parks** are the responsibility of RDNO and include Kin Beach Park and Paddlewheel Park, the community's primary accesses to lake enjoyment. During the public engagement process, numerous comments were received regarding these parks. These comments have been compiled and forwarded to RDNO for information and consideration.

# Neighbourhood Parks:

## **General Recommendations:**

- Follow the 10 year Playground Replacement Plan, as identified on pages 66-67,to ensure playground structures are regularly replaced, and added to, as needed
- Engage the community when designing any improvements within neighbourhood parks.
- Incorporate natural and adventure play features and Literacy in the Environment (LITE) into playground designs, where appropriate

- Ensure benches, waste receptacles, shade trees and signage are provided, updated and well maintained in all parks
- Secure additional land for future
   Neighbourhood Parks via the development
   process where identified on the Parks
   Master Plan map
- Incorporate Crime Prevention Through Environmental Design during the design or the replacement process, with particular focus on the natural surveillance from surrounding properties

## **Management Principles:**

- Asphalt walkways (2m) are provided to amenities located within the park
- Minimum tree coverage should be 10 trees per 1 acre
- Benches should be primarily located adjacent to playground structures and in other appropriate locations
- Trash receptacle locations must be accessible for park users and with consideration of ease of maintenance
- Cut grass once per week, as a minimum standard
- Waste collection should take place daily in the summer months. Reduce collection throughout the other months
- All landscaped areas are to be irrigated

# Urban Parks and Plazas:

#### **General Recommendations:**

- Improvements to existing urban parks will be required to keep them active, lively and safe, while promoting the City Centre as a popular place for shoppers, visitors and business investment.
- Working with stakeholders, community organizations, the Downtown Vernon Association and Recreation Services, continue to support events, social activities, music, art and entertainment in Community and Urban Parks

- Consider opportunities and amenities for youth in the design and use of Urban Parks and Plazas
- Purchase pop-up park equipment to add whimsy to underutilized public space including specific areas within existing parks, vacant lots and road rights of way. Pop-up park equipment would include folding chairs and tables, planter boxes with plants and trees and various items people can play with. Establish a program where the public can request the equipment be placed in a specific location for a month at a time
- Support random acts of art that are temporary such as yarn bombing and chalk drawing, working closely with Bylaw Compliance
- Continue to encourage murals that showcase the talents of a variety of local artists and artistic styles to add colour and beauty to the cityscape
- Implement a public art policy, as per the City Centre Neighbourhood Plan, and encourage public art installations in Urban Parks and Plazas
- Consider adding music to Urban Parks, both live and recorded, to provide enjoyment and encourage use
- Encourage food and beverage trucks and carts in Urban Parks and Plazas by developing a clear policy and process for locating and licencing these services

## **Management Principles:**

- Urban Park design should include an irrigation system and/or establishment water plan
- 2-3m wide asphalt/concrete/unit pavers shall be used for walkways
- Lighting of the park will be evaluated on a site by site basis, although most parks will not provide lighting for after hours use (except where appropriate through CPTED review)
- Electrical service is intended to be provided in parks for events, as determined by need, frequency of events, etc
- Attractive planting beds are required with minimum tree coverage of 10 trees per acre
- Provide clustered benches for social interaction
- Provide waste and recycling receptacles, park signage, bike racks and access to WiFi
- Maintenance and waste collection in Urban Parks to be provided on an as needed basis

## **Site Specific:**

# **Cenotaph Park**

Cenotaph Park provides a place to remember and respect Canada's veterans, as well as creates a green space for people to gather. A review of the site, evaluation of the monument and a concept plan should be undertaken within the 10 year plan.

## Civic Plaza

Update the existing design for Civic Plaza to improve the usability of the site.

# Athletic Parks:

#### **General Recommendations**

- Conduct an outdoor sports facility condition assessment and recommend an associated maintenance and upgrading schedule to maintain and repair existing facilities
- Work with RDNO to ensure sub-regional Athletic Parks are upgraded as necessary and well maintained
- Continue to work with sports user groups to minimize scheduling conflicts and ensure fairness and equity for facility bookings
- Upgrade, replace or renovate washroom facilities in Athletic Parks as necessary
- Evaluate the irrigation system for outdoor sports facilities and develop a schedule for upgrades and improvements to more effectively manage and maintain the system over time, including more efficient use of water
- Acknowledge that no additional land acquisition is required for Athletic Park use given the existing inventory
- Continue to offer the Park and Play summer program where recreation staff provide activities in high profile parks

- Create a simple permitting system to use quiet streets for games and to allow block parties.
- Establish a booking system, for a minimal fee, for private recreation programs delivered in parks to track use, help communication and assist in linking residents to programs
- Continue to work with seniors and youth to develop programs and encourage increased participation

## **Management Principles:**

- Work with sports user groups to develop an acceptable field rotation schedule to rest sports facilities as a preventative maintenance initiative
- Evaluate the condition, supply and accessibility of parking at Athletic Parks
- Provide playground structures and or adult fitness circuit in Athletic Parks
- Installation of washrooms and access to drinking water should be considered on a site by site basis
- Provide waste and recycling receptacles close to fields
- Best practices are to be used when designing or replacing irrigation systems

- Continue to support local groups who manage facilities on local parkland, such as the horseshoe and lawn bowling clubs
- Cut grass twice per week, as a minimum standard
- The timing of waste collection should be closely monitored due to events and scheduling. Reduce collection throughout the other months
- Perform a condition assessment on all local sports fields and ball diamonds to inform the development of a comprehensive repair and maintenance schedule to ensure facilities meet user expectations and use water as efficiently as possible
- Explore the installation of lights on an existing field and /or ball diamond to accommodate sports user groups in peak seasons
- Work with North Okanagan Cycling Society to develop a bike skills park, in three phases
- Resurface asphalt tennis courts with a poly surface overtime and include dual-use for Pickleball, where appropriate
- Develop two additional tennis courts and a concrete practice wall within Development District 1 or 2

# **Site Specific:**

#### **Kin Race Track**

The Greater Vernon Parks and Recreation Master Plan prepared in 2004 by RDNO, identified the Kin Race Track property as a site for development of a tournament level sports field facility. At the time, RDNO governed the park and hired a landscape architectural firm to prepare a redevelopment plan for the site. A public open house was held in May 2010 which included a proposal to remove the thoroughbred racetrack. The Vernon and District Agricultural Society challenged the decision to remove the track and the dispute with the society over the use of Kin Race Track has been on-going since this time. This park is now governed by the City of Vernon following the completion of the Greater Vernon Sub-Regional Parks and Trails Service Agreement.

- Once the primary uses of the Kin Race Track site are resolved, a comprehensive Athletic Park design should be developed including consideration of outdoor recreation facilities currently missing from the parks supply
- Develop an 8 court dedicated Pickleball facility, with room for possible future expansion, considering Kin Race Track as a potential location

# Dog Parks

Dog Parks in Vernon are found within the following Neighbourhood Parks: Mission Hill Park, Heritage Park (through a School District lease) and Pioneer Park. Dog ownership is on the rise in many communities across Canada and offers many positive benefits, particularly for physical, mental and emotional health. The aging population is typically moving into smaller homes or multifamily units with less land, and many of these residents own dogs. As parks are improved and new parks are created, space for dogs must be addressed.

Minimizing conflict between different user types in these parks is critical for everyone's safety. Dog enforcement plays a vital role in managing how people use these parks and balancing the needs of dog owners and other users is a challenging, but achievable goal.

#### **General Recommendations:**

- Fence all off leash areas
- Identify effective gate options leading into dog park compounds
- Introduce more benches along the perimeter and at high points in the area
- Ensure consistent and clear signage in all dog parks
- Explore the ability to install trees

- Explore a comprehensive Dog Park management strategy, including a related bylaw review, in collaboration with RDNO and City of Coldstream
- Explore the implications of conducting dog enforcement in parks with City resources to improve results and provide an increased presence in parks
- Establish a new Dog Park in the area designated for High Density Residential development west of the City Centre, with due consideration for the safety of adjacent users.

# Lake Access

Lake access sites are not considered parks, but are rather access to recreation opportunities and lake enjoyment. The lake access sites are identified on the Implementation Plan (Appendix 5) as either improved lake access sites, boat launches or having planned improvements. This reflects the community's desire to continue to retain, protect and improve these sites.

The community has 45 lake access sites, typically in the form of road rights of way. A Community Lake Access Plan was developed and endorsed in 2005 outlining prioritized lake access site improvements and associated budget estimates. An annual budget amount for improvements was recommended but has not been implemented consistently. Five lake access sites have been improved from 2006 to 2010. As lake access was identified as a top priority for the public, the Parks Master Plan proposes the following:

Revise and update the Community Lake Access Plan to reflect the public desire to improve access to the lake

# Community Gardens

Community gardens play an important role in food security as well as providing leisure opportunities. As Vernon grows and more live in multi-family developments, community gardens will pay a larger role in food access. The existing community plots are popular and waitlists exist. RDNO manages the contracts to maintain the gardens and coordinates the programming, registration and fees for garden plots through Recreation Services.

# **General Recommendations:**

- Continue to work with RDNO for the delivery of Community Gardens for residents
- Implement community garden space in the Waterfront Neighbourhood Centre in the vicinity of the Lakers Clubhouse area
- Provide an additional community garden space within Development District 1 or 2
- Considerations for creating new Community Gardens include semi fertile land with the ability to build soil, appropriate vehicle and bike access and parking, available water servicing and a semi private location for the enjoyment of gardeners
- Continue to require dedicated open space in new multifamily developments for the use and enjoyment of their residents

# **New Parks**

How parks are designed, how they are maintained and how people use them all impact how safe they are and how they are perceived. When designing new parks, a public consultation process will be established and followed to receive public input on the future park site. This section explores the various new parks that are being proposed through the 10 year period of this plan. Most of these parks do require the City to obtain future land acquisitions first before designing the parks themselves.

#### **Grassland Park**

The O'Keefe rangelands and the Commonage have been identified specifically as two of the top priority preservation areas by the public. To support the protection of sensitive and rare Okanagan grasslands through the creation of a park, the City would need to work in partnership with other organizations and agencies, including RDNO and other levels of government. A park of this nature would benefit the entire region economically, socially and environmentally and the land area required for such a park would likely require sub-regional involvement. Park uses would focus on limiting public access to protect sensitive areas, with trail systems provided for recreational use.

#### **Transit Terminus Park**

Install a playground structure across from Cenotaph Park, adjacent to the Transit Terminus to provide play opportunities Downtown while making transit a more enjoyable transportation choice for families

# **Centreville Park**

Acquire land for an Urban Park in Centerville, in anticipation of the high density residential development identified for that area. Construction of the park would follow significant redevelopment and build out of this area. Work closely with Partners in Action, the Social Planning Council for the North Okanagan and nearby social service agencies on a detailed design that incorporates CPTED principles, but remains a welcoming space for a variety of users

#### **Recreation Centre Park**

Installation of a naturalized playground adjacent to the creek along 35 Avenue will provide outdoor play for families while others use the indoor facilities in the area.

# **Canadian Lakeview Estates (CLE)**

The recently purchased property will be redeveloped with community input. This parcel is 1.2ha in size and currently has 2 tennis courts, and a storage shed.

# Lakeshore Drive (Proposed new Community Park)

The City owns 11 parcels on Lakeshore Drive, identified as future Community Park on the Parks Plan Map (Appendix 5). The Waterfront Neighbourhood Centre Plan envisions development of this neighbourhood in a way that improves public access to the lake while creating a vibrant mixed use neighbourhood centre. Central to this plan is the provision of additional park space on Lakeshore Road, as public investment and the provision of amenities in the area will help in attracting new development that is consistent with the vision. As redevelopment is targeted for this area, partnerships with developers may be an option to consider in the development of this park.

The following recommendations aim to support the community vision for this area:

- Continue land acquisition along the lake side of Lakeshore Road, focusing on the missing properties in the block where the City owns land (see the Implementation Plan - Appendix 5)
- Develop a park design for the entire block of land designated as a future park, incorporating the proposed Lakeshore Trail and a variety of other uses that would attract residents from all over Vernon, contributing to this neighbourhood's intended role as a major destination in the City

# Civic Arena Site (Proposed new Community Park)

The future of the Civic Arena site is not yet known. A referendum on the fate of the Civic Arena is expected in occur in the fall of 2015. The site is designated as a park in the OCP and detailed policies are provided in the City Centre Neighbourhood Plan. The site presents a unique opportunity to develop a large community park in the City Centre that provides additional public space in a highly urbanized area and promotes redevelopment. This park would provide for a variety of activities, to be

identified through a comprehensive design process, with a focus on community input. The design of the park should aim to seamlessly integrate with the new Visitor Information Centre (VIC) and the 29th / 30th Street Transportation Corridor, and meet the needs of nearby residents, children, seniors, active transportation users, downtown employees and travellers.

Additional recommendations for the Civic Arena site include:

- Given the size of the site, promote the use of the park as a destination for cultural events and activities
- Require a thorough CPTED analysis as part of the design, with due consideration for both the current and future land uses surrounding the park

# **Trails**

Recreation trails provide opportunities for Vernon residents to get outside, enjoy nature and be active. A well developed, robust and connected trail network provides access to key destinations, such as school and work, but also provides additional recreation options that link residents to parks and the unique local environment.

The City of Vernon is responsible for local trails within the city. The Grey Canal Trail and the BX Creek Trail are sub-regional trails and are managed by the Regional District of North Okanagan. The guidance and details pertaining to trail development in Vernon come from both the Pedestrian and Bike Master Plan and

the Ribbons of Green Trail Society Trails Plan. Both documents were recently updated and endorsed by Council in 2014 and 2015.

These two guiding documents outline a vision for the trail network for the next 20 years, while the Parks Master Plan is a 10 year plan. Given the differing timeframes, the trail network as outlined in this plan would be constructed in the next 10 years only, with due consideration for taking action on other components of the trail network should the opportunity arise. The implementation of other trails, pathways and sidewalks that are identified mainly for transportation purposes are addressed in the Pedestrian and Bike Master Plan.

The Grey Canal Trail and the BX Creek
Trail are sub-regional. Continued trail
development and connections are a high
priority for the public.

The land for trails can be acquired in many different ways. Where a trail network is proposed on a property that is developing, it may be possible to have the trail provided as part of a development, by the land owner. In other situations, purchase of land or a right of way for a trail may be required. Other options for acquiring and constructing trails may be realized through agreements with various community organizations or volunteer groups.

# Trail Projects

Both the Pedestrian and Bike Master Plan and the Ribbons of Green Trails Plan are complementary documents that identify trail networks that connect the community through a variety of trails. The Pedestrian and Bike Master Plan focuses on the pathways used primarily for transportation, while this plan focus is on the recreational trails. The larger local trail systems and trail projects proposed over the next 10 years are summarized below:

Check out the Implementation Plan (Appendix 5) for more information

# Foothills Ravine Trail

(~1.2 kilometres) Short Term 1-6 years (Phase 1&2) See Implementation Plan (Trail #1)

The Foothills neighbourhood is characterized by a number of steep slopes and ravines that have been acquired by the City of Vernon as wildlife corridors and drainage features. Both the Ribbons of Green Trails Plan and the Foothills Neighbourhood Plan identify a trail system linked to the ravines as a major component to improve connectivity in the neighbourhood and provide residents with access to trails with beautiful views of the city and the valley. As the land is owned by the City, construction of the trail within the 10 year life of this plan is feasible.

## **Becker Park Trail**

(~1.8 kilometres) Medium Term (1-3 years) Re-establish trails

Becker Park is located adjacent to the Recreational Centre and is close to our downtown area. It is a wildlife corridor, with great view of the City from the summit. The trails are known however need to be evaluated, re-established and reconstruction. Various trail entrances into Becker Park also need to be considered.

# Lower Commonage Trail:

(~ 4.0 kilometres – parallels future road) Phased Short to Long Term (1-10 years) See Implementation Plan (Trail #2)

This trail network would provide excellent views of Okanagan Lake and the Bella Vista Range, while connecting to existing trails in the area. Initial phases of network would be constructed in the following stages within the 10 year life of the plan:

- Bench Row Road to Longacre Drive, providing a walking connection between Bench Row Road and the Waterfront Neighbourhood Centre via Longacre Drive.
- Mission Hill connection to the existing Commonage Trail, through to Valley View neighbourhood with a connection to the existing Commonage Trail connecting Okanagan Avenue to the Jack Schratter Trail.
- Bench Valley View Trail, running along the ridge near Bench Row Road, connecting Longacre Drive and the connecting trail to the existing Commonage Trail at Okanagan Avenue at Fulton Road, with several other access points considered for phased development beyond the 10 year life of the plan.

## Bella Vista Trail Phase 1

(~500 metres)

Medium to Long Term (4-10 years)

See Implementation Plan (Trail #3)

This trail would provide a direct connection from Bella Vista Road near Okanagan Hills Boulevard through the Lakeview neighbourhood to Kin Beach.

## Lakeshore Trail Phase 1

(~500 metres)

Phased Short to Long Term (1-10 years)

See Implementation Plan (Trail #4)

The Lakeshore Trail is proposed to run along Okanagan Lake from the southern boundary of I.R. #6 to Paddlewheel Park. Much of the land for this trail would be provided as development along the waterfront proceeds, so the completion of the trail is well beyond the life of this plan. The first phase of this trail, which would form part of the proposed Lakeshore Community Park, would extend west towards the existing Strand development and would be completed during the life of this plan. Future phases would be undertaken as development proceeds in the neighbourhood.

#### Vernon Creek Trail

(~500 metres)

Medium Term (4-6 years)

See Implementation Plan (Trail #5)

This trail would follow Vernon Creek along its south side from Polson Park to Okanagan Lake. Much of the property required to develop the

trail is privately owned, meaning the ultimate development of this trail would require property dedication as part of redevelopment, which would likely take place over many years, beyond the life of this plan. A portion of this trail is located on City owned property between Marshall Fields and Cummins Road, and could be constructed within the 10 year life of the plan.

# Clerke Road to Mission Road Connector

(~550 metres) Long Term (7-10 years) See Implementation Plan (Trail #6)

A trail connection between Clerke Road and the Allan Brooks Nature Centre would not only offer spectacular views of the city, Coldstream Valley and the Monashee Mountains beyond, but would provide greater access to all of the educational services that the Allan Brooks Nature Centre offers. This trail would link easily to the Jack Schratter Trail, extending that network even further.

In addition to the trails listed above, other trails would be acquired and constructed via the development process in neighbourhoods such as Bella Vista West, Foothills and Predator Ridge. Other smaller trail connections identified in the Pedestrian and Bike Master Plan would be explored, as well.

# Trail Recommendations

- Support the continued incremental development of the trail network to provide connectivity between existing trails (both transportation and recreation) and the parks system in general
- Establish trail design standards to ensure that the trail system is safe, accessible and affordable to build and maintain, recognizing that different contexts for trails will require different and unique design solutions and finishing
- Incrementally install distance markers on high use trails and trail loops
- Include trail development within larger parks for a variety of users as park amenities and to provide connectivity
- Where feasible, acquire land for trails as part of the development process, consistent with the Official Community Plan,

- Neighbourhood Plans and the Pedestrian and Bike Master Plan
- Incorporate Crime Prevention through Environmental Design (CPTED) elements into the design and maintenance of trails
- Continue to work closely with the Ribbons of Green Trails Society and other community organizations that play a role in the development of trails
- Explore the establishment of formal partnerships with local organizations or community groups to construct and act as stewards for trails
- Develop clear and consistent signage and maps, including distance markers, for the trail system.
- Work with partners to develop and update regional trail maps

# Park Maintenance Standards

The following is a list of standards and best practices specific to various landscape and amenity features in parks and open spaces.

#### Maintenance Levels

Currently the City of Vernon is responsible for the care, and maintenance control of local parks within the City's jurisdiction. The City has also been contracted by the RDNO to provide parks maintenance services for all sub regional parks located within the City of Vernon as well as Kal Beach and Creekside Park which is located in the District of Coldstream. This work is completed with a combination of contract forces and 10.2 City staff.

Under the Manager of Public Works there is a Parks Foreman that is responsible for the maintenance contracts and delegates work to 9 full time skilled staff members. Maintenance includes mowing, line trimming, planting, weeding, irrigation installation and repairs, playground maintenance, waste collection, tree care, sport field maintenance, fence and

bleacher repair, washroom maintenance and security. There are also 8 labourer positions that are hired seasonally. These positions are important, as labourers deal with the public first hand.

Following the parks agreement, the City maintained current standards providing a reasonable level of service, however, in recent years, Parks staff have been stretched thin. To ensure adequate operating funds are available to maintain new parks, outdoor recreational facilities and renovations to existing parks, a review of staffing is required.

# **Irrigation**

The Okanagan Valley is a semi-arid region, yet is one of the highest users of water in the world, using considerably more water than the Canadian average. The region is also susceptible to droughts, and climate change projections suggest that precipitation may become less predictable. Reducing water use in the region is important to address the

challenges that climate change is likely to present. At the same time, Vernon residents expect that their parks are beautiful places to spend time in and that they are maintained to a high standard. Providing residents with pleasant park spaces while minimizing water use, however, is achievable.

- Incorporate xeriscaping into park design where feasible to minimize water use and the cost of irrigation infrastructure
- New projects and upgrades will require a properly structured soil profile to assure a sufficient volume of soil to provide optimal holding capacity for plant water requirements
- Inspections of installed systems will ensure that water is applied in appropriate amounts as intended by the design
- Irrigation designs should provide the most practical and efficient water delivery system for the site
- When irrigation installations or modifications are anticipated, site drainage should be assessed and improved if necessary
- Standard equipment and materials should be used to simplify operations and maintenance of the system
- Sprinkler head selection will be limited to the highest quality, lowest maintenance and vandal resistant options
- Design separate irrigation zones for different landscapes such as slopes, soil and plant material
- All parks or open space designed without an irrigation system must include a plan for plant establishment watering including method and a source of water

# Washrooms and Drinking Fountains

The provision of washrooms and drinking fountains in parks is an important part of increasing the public's enjoyment and use of those parks. Washrooms in particular encourage people to stay in parks longer than they would otherwise. Poorly designed or located public washrooms, however, can attract undesirable activities, making the park a less pleasant place to visit. Careful consideration of the design of washrooms is critical to realizing the benefits they can bring to a park.

- Washrooms and drinking fountains should be provided where users will stay for longer periods of time. The provision of washrooms and fountains in urban parks and plazas should be evaluated on a site by site basis
- Perform a CPTED review of the location and the design of new washroom facilities as part of the design process
- Maintenance and replacement of washroom and fountain facilities should follow the replacement program in the Implementation Section
- Explore the ability to increase the amount of drinking water fountains in parks
- Explore the feasibility of providing access to washrooms for a longer season in select Community Parks
- One stall in each washroom (male and female) will be handicap accessible

# **Parking**

Park space is valuable, so finding the right balance between providing adequate parking and maximizing the amount of land for recreational uses in a park is often a challenge. The amount of parking that should be provided depends greatly on the type of park, the amenities available, the availability of other transportation modes like transit, surrounding land uses and other factors. Zoning Bylaw #5000 requires a minimum number of parking stalls in parks, based on the size of the park, but greater flexibility with these regulations may be required to find the best design solution to parking, depending on the park's unique features and context.

- For every 25 vehicle parking spaces, at least 1 should be a handicap accessible parking stall. The location of these parking stalls will be located closest to the facilities
- Explore amendments to Zoning Bylaw #5000 to establish parking standards that reflect the variety of existing and proposed parks in Vernon

# Playgrounds

Playgrounds are a vital part of childhood that help children develop physical strength, coordination and

balance. Creating a safe play environment is essential so children can play, learn and develop new skills.

- Adventurous and nature based play will be a component in the majority of all new designs
- Community consultation is desired in the process of installing a new or upgrading an existing playground structure
- The Park Playground Development and Replacement Plan looks at improving/replacing or adding to playgrounds in various parks. Please see the Implementation Section of the Plan
- Play areas shall not be located in low areas where water may collect
- All play areas shall meet CSA standards and have at least one handicap accessible play component
- Explore the need for alternative mulch surface, such as rubberized material
- Incorporate LITE Literacy in the Environment, in future playgrounds and parks

LITE is based on the premise that placing foundational reading experiences in play spaces will support the development of literacy skills.

# Benches/Picnic Tables/Trash Receptacles

Creating a location for the whole family within parks and along trails often involves seating areas, a place to rest and relax. Whether these areas include picnic tables or benches, people will visit with others stay longer when seating areas are provided.

- Provide an appropriate number of benches and picnic tables in all parks to increase park user enjoyment
- Standard bench design should be established
- All amenities should be designed/selected to be durable, not prone to fading and bevandal-resistant (easily fixed or repainted)
- Benches and picnic tables should be located around the high traffic areas, e.g. playgrounds and areas in high use dog parks
- Increase the number of waste and recycling receptacles in parks
- Explore expanding the frequency of waste pick up and extending the season the service is provided
- Waste receptacles should be located primarily at entranceways and high use play areas. However, waste receptacles should not be placed closer than 2.0m from park benches or play equipment to avoid stinging insects and odours

## **Trees and Shrubs**

Thoughtful tree and shrub species selection in combination with good planting practices helps to

achieve the best long term outcomes for our urban forest, protecting the public's investment in those plants and reducing the costs of unnecessary maintenance and replacement. While the selection of tree species should always take into consideration the unique context of each park, there are a number of best practices that should be considered.

- Continue to promote and plant native, low maintenance plant species
- Tree species native to British Columbia should be considered for all landscape designs
- Landscape design should consider both a mix of deciduous and coniferous species with a variety of genera and species. Aim for 40% coniferous and 60% deciduous within a park
- To ensure a more resilient landscape, there shall be no more than 25% from any single genus in each park
- Introduce edible plants into local parks
- Setback standards to be established to property lines, roadways, etc.

# Pest & Weed Management

Pest management and weed control can be controversial practices. The City of Vernon acknowledges the need to balance pest and weed management with safety concerns raised regarding pesticide use. Currently the City is operating under the RDNO 1996 adopted Pest Management Plan, however, a new pest management plan will be explored that is in line with current best practices.

- A standard park sign design should be developed that is attractive, branded, consistent and readable while being low maintenance. These signs should clearly demonstrate park uses and function and be consistent with the City wayfinding program.
- A sign replacement program should be

# Signage and Park Naming

The existing park signage design and content is inconsistent. Different materials, fonts, colours and messaging cause confusion amongst park users regarding park management and rules, often creating challenges for bylaw enforcement. Some signs are also high maintenance and need to be replaced regularly. In addition, there is currently no City policy in place to establish names for new parks.

- developed and incorporated into the regular budgeting process to ensure all parks signage is consistent and readable
- Develop a park naming policy that provides clear direction for the selection of names for parks and trails

# **Implementation**

To realize the vision set forth in the Parks Master Plan, an approach to project funding and phasing is required that is realistic and

achievable. The implementation strategy is designed to nurture the existing parks system, while acquiring new lands in priority areas and also developing the desired amenities that the community indicated were missing.

The proposed implementation strategy is based on existing policies, emerging trends, community demographics, demand analysis,

community partnerships and the public engagement results. Project phasing, cost estimates and varied sustainable funding mechanisms are provided below and are all key aspects required for the successful implementation of the Parks Master Plan.

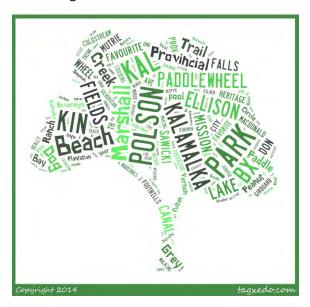

# Park Land Acquisitions and

# Leases

A five and ten minute walking distance was analysed around parks, trail accesses and developed school district properties in developed areas of the city. (see Appendix 4) Agricultural and rural areas were not included in the analysis as the lower densities do not warrant the same attention as built up, more dense neighbourhoods.

Check out the Walkability Map attached as Appendix 4.

This exercise helped identify areas that could be considered deficient in parkland. These areas are identified for future parkland acquisition on Appendix 5: the Implementation Plan.

To proceed with developing various desired park and trail projects and to keep pace with expected population growth and demographic shifts, additional lands for park uses are required. Land acquisition priorities are identified in this plan that address growth while complementing the growth strategy outlined in

the OCP. Land acquisitions would be facilitated through the various funding sources outlined below, through dedications during development processes and through gifting and donations.

Properties and priority areas in the City Centre, the Waterfront Neighbourhood Centre and other areas of the community identified as deficient in parkland are the focus of land acquisition for local parks. The estimated total cost of these property acquisitions is approximately \$3.2 million. These land acquisitions should be allocated for parks over the 10 year life of the Plan. These areas have been identified in Appendix 5.

Parkland acquisition priorities include:

#### **Short Term**

- Lakeshore Drive waterfront lots, focusing on the intervening lands between City owned parcels (three in total remaining). Lots north of the blocks owned by the City will not be contemplated during the 10 year life of the plan
- Converting the Civic Arena block to parkland subject to the outcome of the anticipated Civic Arena referendum in 2015
- Land lease opportunities in park deficient, developed neighbourhoods

# **Medium Term**

- Parkland acquisition in high density multifamily designated areas within the City Centre Neighbourhood, specifically Centreville, and the adjacent area to the west, in Development District 2.
- Key trail connections to larger trail networks.

# **Long Term**

Park deficient, developed neighbourhoods where land can be secured through adjacent development.

Considerations for parkland acquisition priorities include:

The existing parks supply

The Official Community Plan Growth Strategy

The top community priorities: Trails and Pathways, Lake and Beach access, Natural Areas, Neighbourhood and Community parks

Park deficient areas as seen in Appendix 3 and 4

# Parks and Trails Projects: Phasing Plan

In addition to parkland acquisition, a series of projects in existing and future parks have been identified for the next 10 years. A phasing plan for these parks is organized into three categories: short term (1-3 years), medium term (4-6 years), and long term (7-10 years). The recommendations are based on several considerations:

- analysis of existing park inventory
- background research
- parks and recreation trends
- best practices
- public survey responses
- stakeholder input
- public consultation event feedback
- anticipated financial capacity

The proposed timeframes are flexible. Should the opportunity arise from available grants, outside contributions, or development driven completion of a project, Council may consider a different timeframe than is suggested. These projects will require capital funding as well as other funding strategies to realize these improvements. With the addition of new assets, it is important that an adaptive management approach be established and operational cost impacts are considered each year.

# Short Term Parks and Trail Projects (1-3 years)

Short term projects aim to limit the need for significantly increasing investments in parks while developing new amenities on existing City owned land, maintaining adequate service levels for the community and having little impact on operational costs. The proposed construction projects are also anticipated to receive significant contributions from community organizations. These identified projects are high priority items for direct implementation.

## Parks Design, Planning and Policy Development

Develop a Master Plan for Lakeshore Park, contingent on phased implementation, anticipated property acquisitions and development driven contributions

- Develop a Master Plan for the Civic Arena block, depending on the results of the 2015 Civic Arena referendum
- Complete the Polson Park Master Plan
- Develop a plan for Kin Park (on the Kin Race Track lands)
- Establish City of Vernon Park specifications standards
- Establish City of Vernon Park signage standards and replacement program
- Develop a Park/Trail Naming Policy
- Develop a park design for the Canadian Lakeview Estates Park (CLD Park)

#### **Project Construction**

- Install and replace playground equipment and surfacing at the Park at the Transit Terminus, Mission Hill Park, Alexis Park, Heritage Park and Polson Park
- Design and construct a Disc Golf course on the Lakers Clubhouse lands, in coordination with spadefoot habitat protection and enhancement
- Resurface the Sawicki Park tennis courts with a poly surface and include dual use line painting for pickleball
- Upgrade baseball diamond fencing and removal of various excess fencing around parks
- Complete permitting, design work and install the rehabilitation plan for Hidden Park

- Design and construct a neighbourhood park in Foothills
- Reconstruct washrooms at Lakeview Park
- Lakeshore Park Phase 1

#### **Trail Construction**

- Expand and improve the trail network within local Parks
- Design and construct trails associated with the ravine lots at Foothills
- Upgrade the existing Becker Park trail system

# Medium Term Parks and Trail Projects (4-6 years)

In the medium term, the plan suggests slightly more aggressive investment in the parks system and finalizing park specific Master Plans for key redevelopment areas.

## Parks Design, Planning and Policy Development

- Perform a 5 year review of the Parks Master Plan
- Explore Dog Park enforcement options
- Develop a Park and Trail Map
- As development in the Bella Vista/Lakeridge area increases, work with developer to secure a trail route to Kin Beach.

## **Project Construction**

- Complete Polson Park Phase 1 improvements
- Complete Civic Arena block Phase 1 improvements
- Complete CLD Phase 1 improvements
- Complete Recreation Centre Park
- Construct onsite parking adjacent to Lakers Clubhouse
- Upgrade public washrooms as required
- Replace and add playground equipment and resurfacing to Kimura Tot Lot and Sawicki Park
- Construct dedicated Pickleball courts
- Construct dog beach area

#### **Trail Construction**

- Construct Valleyview Place trail connection to Commonage pathway in Mission Hill neighbourhood
- Construct Phase 1 of the Lower Commonage Trail Network
- Construct the Vernon Creek Trail between Marshall Fields and Okanagan Lake
- Improve the south entrance of Polson Park

# Long Term Parks and Trail Projects (7-10 years)

In the long term, the Plan suggests concentrating on the construction works in the previous years' park specific master planning projects. As it is recommended that the Parks Master Plan be revised after five years, the funding strategy would also be revised based on successful land acquisitions, park dedications and project estimates.

# Parks Design, Planning and Policy Development

- Various policy and park specific Master Plan refinements
- Re-evaluate funding strategy
- Design Cenotaph Park improvements
- Refine the Civic Plaza redevelopment plan

#### **Park Construction**

- Construct Phase 2 improvements to Polson Park
- Upgrade public washrooms as required
- Upgrade playground equipment at Armory Park and Grahame Park
- Install sports field lighting
- Construct two additional tennis courts within Development District 1 or 2
- Lakeshore Park Phase 2

#### **Trail Construction**

- Construct the Trail between Clerke Road and the Allan Brooks Nature Centre
- Construct the Lakeshore Trail throughout Lakeshore Park to the Strand Phase 1
- Construct Phase 1 of the Bella Vista Trail

A total of 42 capital projects are recommended during the anticipated life of the Parks Master Plan. Smaller investments in wayfinding signage, trees, benches, picnic tables and pop up park equipment are not included in the Phasing Plan as these items are considered ongoing.

**Table 1** - Parks and Trails Project Phasing Plan, shown below, outlines the estimated budget amounts for each proposed project based on today's construction rates. The cost levels indicated are estimates only and would need to be refined as more detailed capital programs and budgets are developed. Each year staff would review the capital recommendations and prepare detailed strategies for funding and implementation of priority projects for Council's consideration.

Table 1 – Parks and Trails Project Phasing Plan

Proposed Park Projects	Time Frame (yrs)	Budget Amount	Anticipated Outside Contributions	Total Cost
Transit Terminus Park	1-3 years	\$85,000	\$5,000	\$90,000
Disc Golf Course Design and Build	1-3 years	\$25,000	\$15,000	\$40,000
Spade Foot Toad Habitat Enhancement and Signage	1-3 years	\$15,000	\$5,000	\$20,000
Resurface Sawicki Tennis Courts	1-3 years	\$50,000		\$50,000
Pump Track near Laker's Clubhouse (3 phases)	1-6 years	\$45,000	\$150,000	\$195,000
Lakeview Estates Park (CLD)	4-6 years	\$80,000		\$80,000
Hidden Park	1-3 years	\$100,000		\$100,000
New Foothills Park	1-3 years	\$150,000		\$150,000
Rec Centre Park	4-6 years	\$100,000		\$100,000
Neighbourhood Park (39 <sup>th</sup> Street)	4-6 years	\$90,000		\$90,000
Pickleball Courts (8)	4-6 years	\$200,000	\$50,000	\$250,000
Lakers Clubhouse Parking lot	4-6 years	\$160,000		\$160,000
Tennis Courts (2)	7-10 years	\$200,000	\$50,000	\$250,000
Dog Park on Bench Row Road	7-10 years	\$60,000		\$60,000
Dog Beach	4-6 years	\$10,000		\$10,000
Polson Park Master Plan Improvements	1-10 years	\$3,000,000	\$500,000	\$3,500,000
Civic Arena Master Plan Improvements	4-6 years	\$1,100,000	\$100,000	\$1,200,000
Lakeshore Master Plan Improvements	1-10 years	\$600,000	\$100,000	\$700,000
Sports Field Lighting	7-10 years	\$250,000	\$50,000	\$300,000

**Totals		\$8,352,000	\$1,150,000	\$9,502,000
*Signage, Benches and Picnic Tables	1-10 years	\$500,000		\$500,000
Alexis Park	7-10 years	\$175,000	\$25,000	\$200,000
MacDonald Park	7-10 years	\$150,000	\$50,000	\$200,000
Grahame Park	4-6 years	\$175,000	\$25,000	\$200,000
Laker's Clubhouse	4-6 years	\$200,000		\$200,000
Lakeview Park	1-3 years	\$400,000		\$400,000
WASHROOMS				
Allan Brooks Trail (550m)	7-10 years	\$40,000	\$15,000	\$55,000
Lakeshore Trail Phase 1 (~500m)	7-10 years	\$90,000		\$90,000
South Entrance of Polson Park	4-6 years	\$20,000		\$20,000
Vernon Creek Trail (~500m)	4-6 years	\$12,000		\$12,000
Bella Vista Trail (~500m)	4-6 years	\$40,000		\$40,000
Lower Commonage Network Trail (~4km)	4-6 years	\$150,000		\$150,000
Foothills Ravine Trail (Phase 2 ~0.6km)	4-6 years	\$40,000		\$40,000
Foothills Ravine Trail (Phase 1 ~0.6km)	1-3 years	\$25,000	\$5,000	\$30,000
Becker Park Trails	1-3 years	\$15,000	\$5,000	\$20,000

<sup>\* \$50,000</sup> per year proposed to be dedicated to Signage, Benches and Picnic Tables

<sup>\*\*</sup>An inflation rate of 10% per year should be added to these estimates as time continues. As new parks are developed, adequate operating funds would need to be available to maintain new parks. For every new park of 3.0 hectares (7.4 acres) at a community park maintenance level, the City of Vernon's maintenance program needs to increase by one Full Time Equivalent (FTE).

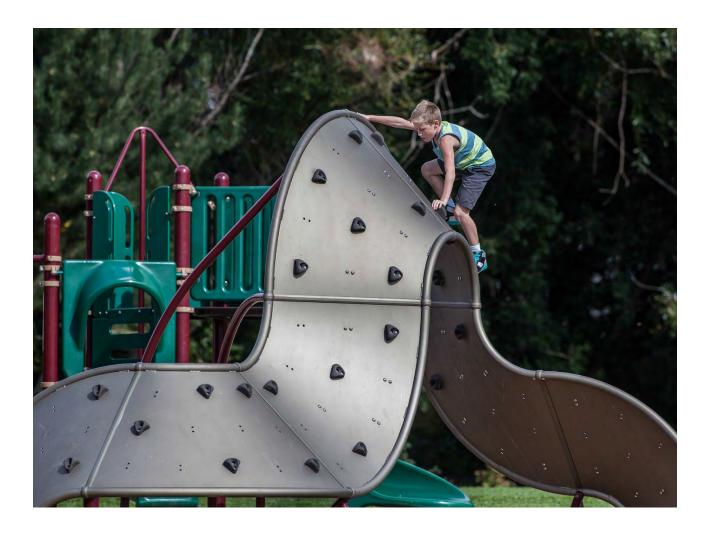

**Table 2** – 10 year Playground Replacement Plan is shown below. It identifies a proposed time frame in which each upgrade is to occur and indicates a budget estimate amount. New playground installations are listed in the table but budget figures are provided above in Table 1 - Parks and Trails Project Phasing Plan, as they generally form part of larger projects and are proposed additions to the playground supply.

Table 2 – 10 year Playground Replacement Plan

Playground Structure Inventory	Park Category	Project	Short Term 1- 3 years	Medium Term 4-6 years	Long Term 7-10 years
Alexis Park	Athletic	Replacement	\$90,000		
Armory Park	Neighbourhood	Additions			\$20,000
Transit Terminus	Urban Parks and Plazas		Capital Project		
Civic Arena	Community	Design and Development		Capital Project	
Girouard Park	Neighbourhood				
Grahame Park	Athletic	Replacement			\$60,000
Heritage Park	Neighbourhood	Replacement	\$90,000		
Heron Glen Tot Lot	Neighbourhood				
Kimura Tot Lot	Neighbourhood			\$20,000	
Kin Racetrack Park	Athletic				
Kiwanis	Neighbourhood

S. Vernon STP	Neighbourhood				

Sawicki Park	Neighbourhood	Additions + Base			
Silver Star Foothills Park	Neighbourhood				
Sterling Estates	Neighbourhood				
*RDNO transfer for 2015	playground replace	ements	(\$180,000)		
Totals			\$173,500	\$180,000	\$80,000

Funding Plan (To be finalized based on Council, Committee, Stakeholder and Community Feedback)

A variety of funding sources and mechanisms are being explored to achieve the estimated cost of implementing the draft Parks Master Plan, as proposed, at approximately \$13.1 million. The proposed funding sources are outlined below with estimated revenue amounts.

The Parks Master Plan implementation is estimated at ~ \$13.1 Million

# Outside Contributions = \$1.1 Million

Community support to implement the Parks Master Plan is strong. Many community groups and organizations engaged throughout the consultation process indicated a willingness to form partnerships in the implementation of specific projects. This also includes working closely with existing partners, such as the School District, in cost sharing on projects to achieve mutually beneficial objectives. These new and existing partnerships would be developed and promoted.

Anticipated grant revenue also falls within this category. Local, Provincial and Federal grants for park and trail improvements and development would be sought to assist in funding the Plan.

Community amenity contributions would be encouraged from local businesses and developments where a park or trail improvement would benefit not only the community, but also the business (and their employees) or an adjacent development.

Sponsorship and advertising are other forms of revenue generation that would be explored.

# Development Cost Charges = \$7.1 Million

Directly following the adoption of the Parks Master Plan, a Development Cost Charge (DCC) Bylaw would be prepared to create a City of Vernon parks charge. The intent is to set the DCC rate no higher than the DCC rate charged by RDNO up to this time. RDNO is redrafting its Park DCC charge to 40% of the current rate, with the City's new DCC charge set at approximately 60%. If DCC rates remain relatively constant, and based on projected residential development, the total expected revenue would be approximately \$7.1 million over the next ten years. DCC parks charges, currently only charged on residential development, could also be considered for commercial and industrial development. This could be explored during the creation of the bylaw, with due consideration of the need to keep the local development climate competitive.

Once park and trail projects are identified in a DCC bylaw (as informed by the Parks Master Plan), a developer may choose to build a project, in exchange for DCC credits. A developer may feel that building a project would be more beneficial to potential buyers, the surrounding neighbourhood and the development itself, creating a win win situation. This may assist in projects being realized in a more timely manner over the life of the Plan.

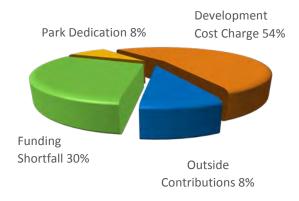

# Parkland Dedications and Cash in Lieu = \$1.0 Million

Parkland dedication, or cash in lieu contributions resulting from subdivisions, as established in the Local Government Act, provides for up to 5% of the land being subdivided, or the value of that land, for parkland. The cash in lieu contributions are held in the Parkland Reserve Fund and are specifically allocated for the purchase of parkland. Land dedications are considered preferable in areas that are identified as deficient in parkland. However, topography and other issues occasionally restrict the ability to provide good quality parkland. In these instances, the cash contribution is required. Over the 10 year period we are predicting that \$1.0 million would be collected through development.

Estimated short fall in funding =\$3.9 Million

**Figure 6: Funding Estimates** 

# Funding Shortfall = (\$3.9 Million)

The Parks Transfer Agreements between RDNO and the City of Vernon resulted in a savings to the City of approximately \$200,000 annually for delivering the local parks function. In order to provide for capital improvements to realize the implementation of the Plan, it is desirable to allocate some funding on an annual basis.

If the proposed Parks Master Plan were to proceed as proposed, the anticipated short fall in funding would be \$3.9 million. An estimated 1.20% tax increase could cover the anticipated \$3.9 million shortfall in funding. During public consultation, the public indicated support for increased taxation if it would be invested and earmarked specifically to improve existing parks and develop new parks. Over 50% of the residents supported a 0-1.7% increase in taxes and 24% supported 1.7%-3.4% increase in taxes for the development of the Park Master Plan.

# Community Support

Community programs would desirably be developed to support improvements and additions to the parks system. An Adopt a Park program would be explored as well as Park donations and endowments would also be encouraged and explored.
